0.1 Download the Repository

Repository Link

- This is our team's repository. This repository contains all the necessary code that we worked on and it also contains the dataset that we annotated.
- You do not need to do anything like uploading and adjusting the paths. Just run the cells sequentially.
- All the necessary commands are written in this notebook itself

0.2 Install the Requirements

- Install all the python dependencies
- After Installing dependencies, Restart the runtime. If you do not restart the runtime, the python will throw "module not found error"

3 Metrics

- Evaluation metrics are pixel accuracy and IoU(Intersection over Union).
- We have achieved an accuracy of 95.9% for Driving area segment
- We have achieved an accuracy of 98.4% for Lane Line segment.
- An average of 97.15 % pixel accuracy is achieved which is comparable to the original model's accuracy.
